PRE + MAINS

**UNION PUBLIC SERVICE
COMMISSION (U.P.S.C.)**

**GENERAL STUDY PAPER – 3
Part – 5 Disaster Management
and Internal Security**

PREFACE

Dear Aspirants, Presented Notes "UPSC – CSE (PRE + MAINS)" have been prepared by a team of teachers, colleagues and toppers who are expert in various subjects.

These notes will help the Aspirants to the fullest extent possible in the examination Of Civil Services conducted by the **UNION PUBLIC SERVICE COMMISSION (UPSC)**.

Finally, despite careful efforts, there may be chances of some shortcomings and errors in the notes / So your suggestions are cordially invited in Infusion notes.

DISASTER MANAGEMENT

<u>SR. NO.</u>	<u>CHAPTER NAME</u>	<u>PAGE NO.</u>
1.	Disaster Management in India	1
	<ul style="list-style-type: none">• What is a Disaster?• What is Disaster Management?• Biological Disasters• Legislations for prevention of Biohazards in India• Prevention of Biological Hazards• Preventive Measures for workers in the field (Medical)• Prevention of Biological Hazards (Environmental Management)• Post-disaster Epidemics Prevention• Detection and Containment of Outbreaks• Legal Framework for Biological Disasters• Disaster Prevention and Mitigation	
2.	Crowd Disaster Management	7
	<ul style="list-style-type: none">• What is Crowd Disaster?• Causes of Crowd-related disasters• NDMA Guidelines for Crowd Management UPSC• Planning the strategy for management• Role of Media• Role of Science and Technology Disaster Mitigation and Prevention• Legal Provisions	
3.	Cyclone Disaster Management in India	10
	<ul style="list-style-type: none">• A Brief About Cyclones• Cyclones in India• Bholia Cyclone – 1970• Odisha Cyclone – 1999• Cyclone Fani – 2019• Cyclone Amphan – 2020	

- *Cyclone Nisarga – 2020*
- *Cyclone Nivar – 2020*
- *Cyclone Burevi – 2020*
- *Cyclone Disaster Management*
- *Mitigation Measures*
- *India's Cyclone Disaster Management Initiatives*

4. Cyclone

13

- *Types of Cyclone*
- *Tornadoes*
- *How is a Cyclone formed?*
- *How are Cyclones addressed in Different Locations?*
- *How are Cyclones named?*
- *Tropical Cyclones*
- *Names of cyclone in different regions*
- *Cyclones in the Indian Ocean*
- *Hurricanes in the Atlantic*
- *Typhoons in the Western Pacific and the South China Sea*
- *Willy-willies in Western Australia*
- *Conditions for the formation of Tropical Cyclone*
- *Formation of Cyclone*
- *Eye of Cyclone*
- *Temperate Cyclone (Extratropical Cyclones)*
- *Characteristics of Temperate Cyclone (Extra-Tropical Cyclones)*
- *Major Differences between Temperate Cyclone and Tropical Cyclone*
- *A Look at Different Types of Storms*
- *However, How Does a Storm Occur?*

5. Amphan Cyclone

22

- *Facts about Cyclone Amphan*
- *Cyclone Nisarga*
- *Cyclone Nisarga and Important Regions*
- *Cyclone nisarga*
- *Tropical Cyclones in the Arabian Sea*

6. National Disaster Management Authority	25
<ul style="list-style-type: none">• National Disaster Management Authority• National Disaster Management Authority Vision• Functions of National Disaster Management Authority (NDMA)• Organizational Structure	
7. National Disaster Management Plan (NDMP)	26
<ul style="list-style-type: none">• Latest Context related to National Disaster Management Plan• What is the National Disaster Management Authority – NDMA?• NDMP Vision• Strengthening Disaster Risk Governance• Salient Features of NDMP• NDMP Objectives• Response Plan	
8. Chemical Disaster Risk in India	29
<ul style="list-style-type: none">• Brief Overview• Factors Causing Chemical Disasters• Legal Safeguards against Chemical Disasters in India	
9. New Bio-Medical Waste Management Rules 2016	30
<ul style="list-style-type: none">• What is Bio-Medical Waste?• Latest Context related to Bio-Medical Waste• Bio-Medical Waste Disposal – Importance• Bio-Medical Waste (BMW) Management Rules, 2016 – Salient Features• Will this Make a Big Difference to the Clean India Mission?	
10. Disaster Risk Index	32
<ul style="list-style-type: none">• What is a Disaster Risk Index?• How many states in India are prone to disaster?	
11. Environmental Hazards and remedial measures	33

- *On the basis of main causative factors, the environmental hazards and disaster are of two types*
- *Natural hazards are further subdivided into two categories*
- *Planetary hazards and disasters are of two types*
- *Anthropogenic hazards and disasters are of three types*
- *Earthquake and its management*
- *Flood and its management*
- *Some important abatement steps may be outlined as follows*
- *Landslides*

12. Vulnerability Profile of India 37

- *Background of Disaster management*

13. Disaster Management Act, 2005 38

- *Features of the Disaster Management Act 2005?*
- *National Disaster Management*
- *National Executive Committee*
- *State Disaster Management Authority*
- *District Disaster Management Authority*
- *National Disaster Response Force (NDRF)*
- *What has been the progress made by DMA 2005?*
- *Criticism of the Disaster Management Act*
- *Provisions of NDMA 2005*

14. National Policy on Disaster Management (NPDM) 2009 40

- *NPDM 2009: The Vision*
- *What does the National Policy deal with?*
- *Background of National Policy on Disaster Management (NPDM) 2009*
- *Who is responsible for Disaster Management?*
- *NDRF*

15. National Disaster Management Plan 2016 42

- *National Disaster Management Plan 2016: The history*

- Which authority prepared the National Disaster Management Plan 2016?
- National Disaster Management Plan 2016: The Salient Features

16. Why in the News

43

- Classification of Disasters
- Causes for Occurrence of Disaster
- Impacts of Disaster
- Worst Disasters in India
- Stages in Disaster Management
- Disaster Risk Reduction (DRR)
- Disaster Risk Reduction in Sustainable Development Goals
- Challenges in Disaster Risk Reduction

17. Man Made Disaster

47

- Nuclear and Radiological Disaster
- Do's and Don'ts
- Preparedness for Nuclear/Radiological Emergencies
- Major Responsibilities of Nuclear Power Plant Operators
- Major Responsibilities of Off-Site Officials
- Emergency Preparedness for Nuclear Power Plants
- Handling a Plant Emergency

18. Chemical Disaster

49

- Status of Chemical Disaster Risk in India
- Safety initiatives taken in India to address chemical risk
- Common Hazardous Chemicals

19. Sendai Framework - Disaster Risk Reduction

51

- Sendai Framework for Disaster Risk Reduction (SFDRR) - Introduction
- SFDRR - Objectives
- Sendai Framework - High Priorities
- Major Departures regarding the Sendai Framework

- *Difference between Hyogo Framework and Sendai Framework*
- *Hyogo Framework*
- *Sendai Framework*
- *India's Initiatives for DRR after signing Sendai Framework*

20. Bio Terrorism threat to India and India **53**

21. Biological Warfare **54**

- *Key differences between Biological Warfare (BW) and Bio Terrorism (BT)*
- *Significance of NHRR*
- *Key Benefits of National Health Resource Repository*

22. World Health Organization (WHO) **56**

- *World Health Organization (WHO)*
- *Recent Update*
- *Facts about WHO for UPSC*
- *What is the Overall Focus of the WHO?*
- *What is the Health Policy of the WHO?*
- *Contribution of WHO*
- *Contributions of the WHO in India*
- *What are the current challenges of WHO?*

23. Traditional Knowledge for Disaster Management **59**

- *High Cost of Disaster*
- *Earthquakes*
- *Tsunamis*
- *Floods*
- *Landslides*
- *Avalanches*
- *Industrial Disasters*
- *Reforms after Bhopal Gas tragedy*
- *Epidemics*

- Nuclear Hazards
- Slow vs Rapid Onset disasters
- Climatic Change
- Droughts
- Desertification and Soil Degradation
- Sea Erosion
- Crisis/Disaster Response Mechanism in India
- Disaster Response Mechanism in India
- Constitution of India: Disaster Management
- State Government & Disaster Management
- Role of CM
- Role of Chief Secretary
- Role of District Collector
- Union Government & Disaster Management
- Role of cabinet Secretary
- Where does the money come from?
- Role of Army
- laws
- Timeline of Events: Disaster Management in India

24. Disaster Risk Insurance

67

- Challenges to Disaster Management
- Stakeholders in Disaster Risk Insurance
- Pros & Cons of Disaster Risk Insurance
- Risks associated with Disaster Risk Insurance

25. Community based Disaster Management

70

- Aim of CBDM
- Advantages of CBDRM
- Conclusion

26. National Disaster Management Plan for Animals

71

- Which authority prepared the National Disaster Management Plan for Animals (DMP)?

- DMP: Three Parts
- Why DMP for animals?

27. Epidemic Diseases Act 1897: The powers under Section 188 of IPC **73**

- Epidemic Diseases Act 1897 is an Act to provide for the better prevention of the spread of Dangerous Epidemic Diseases.
- Why is the Epidemic Diseases Act 1897 in news now?
- Epidemic Diseases Act 1897: Previous Implementations
- Epidemic Diseases Act, 1897: Various Sections
- Section 2: Power (of state governments) to take special measures and prescribe regulations as to dangerous epidemic disease
- Section 2A: Powers of Central Government
- Section 3: The penalty under Epidemic Diseases Act, 1897
- Section 4: Legal protection to implementing officers
- The Epidemic Diseases (Amendment) Ordinance 2020
- Section 188 of Indian Penal Code, 1860
- Circumstances under which Sec 188 IPC is invoked normally
- Conclusion

28. Coronavirus (COVID-19): Outbreak, Impact, and Prevention **76**

- What is Coronavirus?
- Viruses and Viral Infections
- Coronavirus Genome
- Coronavirus (COVID-19) – Origin and Transmission
- Coronavirus (COVID-19) – Clinical Manifestations
- Coronavirus (COVID-19) – Prevention and Treatment
- Other Human Coronaviruses
- Global Impact of Novel Coronavirus COVID-19
- Public Policy for Handling Pandemics
- Case Study 1: Pandemic Interval Framework
- Case Study 2: How Kerala Handled Nipah Virus Outbreak
- Case Study 3: China's use of technology to manage the spread of COVID-19.
- Know the difference: Outbreak, Epidemic, and Pandemic

- *Conclusion*

29. Oil Spill Disasters: Why Indian Disaster Management Process Needs a Review?

82

- *Chennai Oil Spill: Was it the first instance of the oil spill in India?*
- *What are the main causes of Oil Spills?*
- *What are the major impacts of Oil Spill?*
- *Is there a law in India which covers an Oil Spill Disaster?*
- *National Oil Spill Disaster Contingency Plan*
- *International Convention on Civil Liability for Bunker Oil Pollution Damage, 2001 (Bunker Convention)*
- *Civil Society and Public*
- *What are the problems faced in the oil-remedial processes?*
- *What are the available technological solutions?*
- *What is the aftermath of the Oil Spill accident?*
- *India and Neighbourhood*
- *Conclusion*

30. Volcanoes

86

- *Magma vs Lava: The difference*
- *Types of Volcanoes*
- *Shield Volcanoes*
- *Cinder Cone Volcanoes*
- *Composite Volcanoes*
- *Caldera*
- *Flood Basalt Provinces*
- *Mid-Ocean Ridge Volcanoes*
- *Volcanic Landforms*
- *Volcanic Igneous rocks (Extrusive igneous rocks)*
- *Plutonic Igneous rocks (Intrusive igneous rocks)*
- *Distribution of Volcanoes*
- *Volcanic Activity*

31. Forest Fires	89
<ul style="list-style-type: none">• <i>What is a Forest Fire?</i>• <i>Major Forest Fires in 2021</i>• <i>Instances in India</i>• <i>Effects of Forest Fire</i>	
32.Landslide and Flash Floods	90
<ul style="list-style-type: none">• <i>Landslide</i>• <i>Causes</i>• <i>Landslide-Prone Areas</i>	
33.Floods in India	92
<ul style="list-style-type: none">• <i>Floods in India – Overview of the Major Problem</i>• <i>Some of the major floods in India in the past decade are</i>• <i>Floods in India – Major Causes</i>• <i>Flood Management in India – Different Factors</i>• <i>Floods in India – Different Agencies for Flood Control in India</i>• <i>Floods – Broad Categories</i>• <i>Floods in India – 4 Different Regions</i>• <i>Flooding – Measures to Control or reduce Damages</i>• <i>Urban Floods and Major Causes</i>• <i>Urban Flooding – Major Causes</i>	
34.PM Cares Fund – Objectives, Constitution, and Issues	95
<ul style="list-style-type: none">• <i>What is a trust?</i>• <i>Trusts in India</i>• <i>What is the PM-CARES Fund?</i>• <i>Objectives of PM-CARES Fund</i>• <i>Constitution of the Trust</i>• <i>What you should know about PM Cares Fund</i>• <i>Prime Ministers’ National Relief Fund (PMNRF)</i>	

- *PM Cares Fund vs PM National Relief Fund vs CM State Relief Fund vs SDMA*
- *Issues with PM-CARES Fund*
- *Suggestions regarding PM CARES Fund*
- *Conclusion*

35. Coalition for Disaster Resilient Infrastructure Society (CDRIS) 98

- *The aims and objectives*
- *The objectives of establishing the Society are as follows*
- *Countries joined*
- *Shanghai Cooperation Organization (SCO)*
- *Cooperation with BRICS countries*
- *India-Japan Workshop on Disaster Risk Reduction*
- *International Workshop on Disaster Resilient Infrastructure (IWDR)*
- *First Joint Disaster Management Exercise for BIMSTEC Countries, 2017*
- *First Asian Ministerial Conference for Disaster Risk Reduction, 2016 after the adoption of SFDRR*
- *Cooperation with UNI DSR, 2016*
- *Meeting of BRICS Ministers for Disaster Management, 2016*
- *First Disaster Management Exercise with SAARC Countries in 2015*

36. The Role of Media in Disaster Management 103

- *Overview of the Role of the Media in Emergency Management*
- *Positive Role of the Media*
- *Negative Role of the Media*
- *This is primarily a function of an ignorant press; and whose responsibility is it to see that the media become better informed?*
- *Local versus National Media*
- *Differences in Media Coverage*
- *Radio news organizations*
- *Print media*
- *Importance of the News Media*

- *Techniques for Dealing with the Media*

37.ROLE OF SOCIAL MEDIA IN DISASTER MANAGEMENT

CHAPTER - 1

DISASTER MANAGEMENT IN INDIA

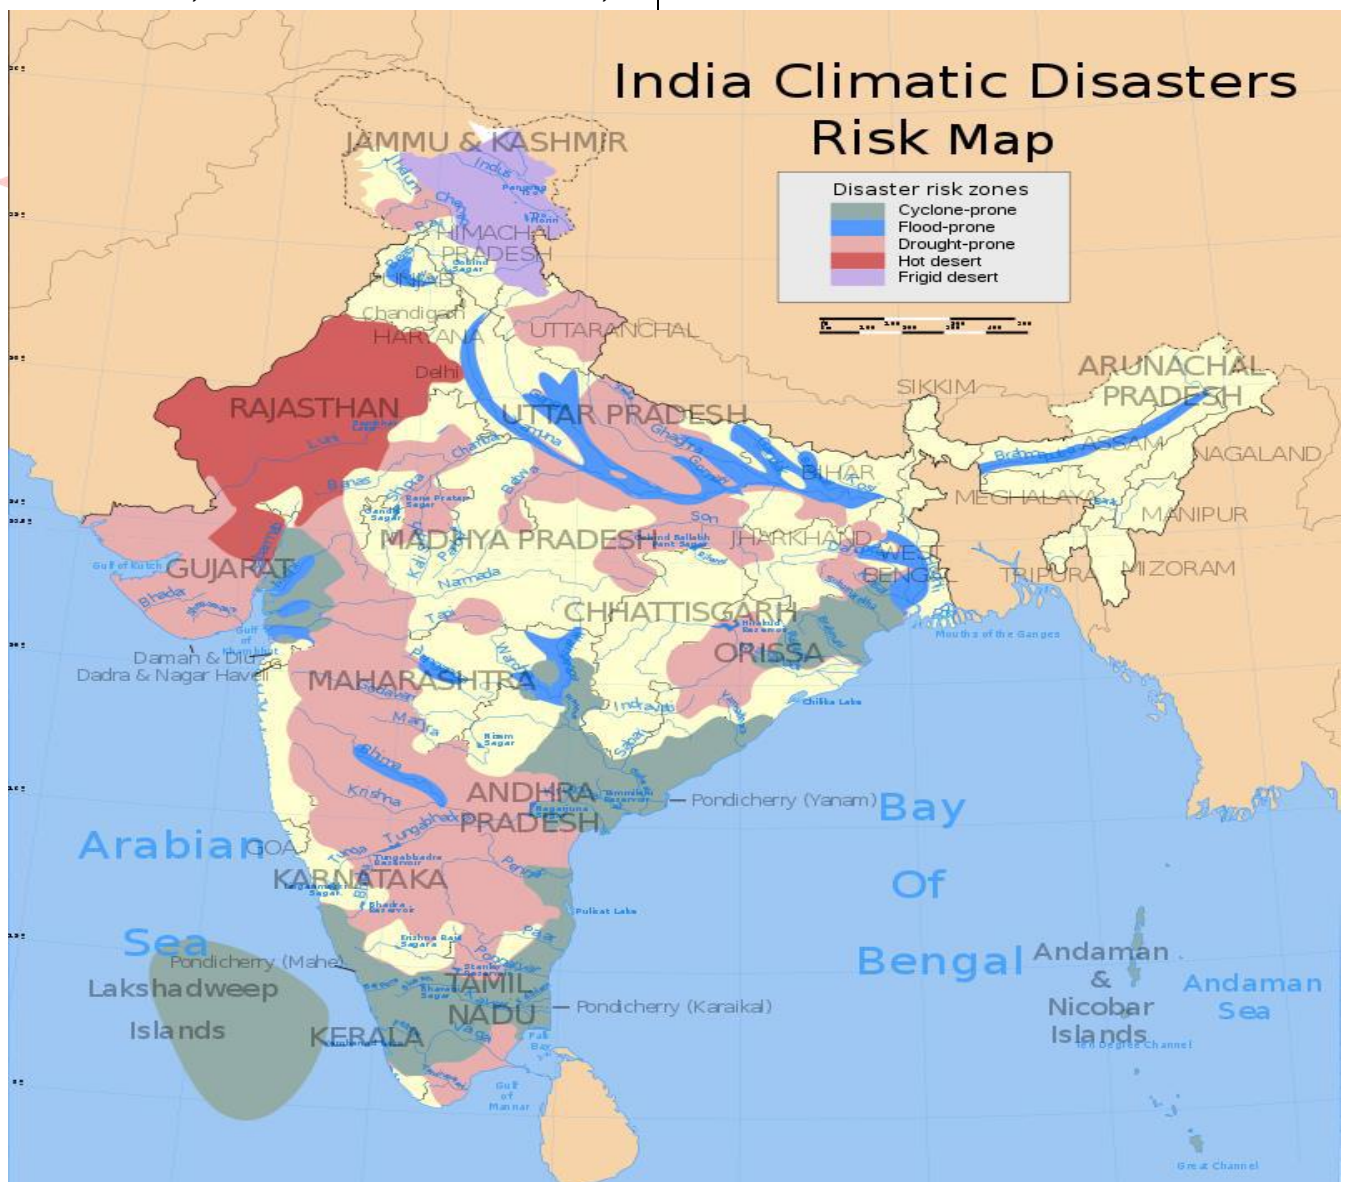

Loss of life and property due to these disasters have been steadily mounting throughout the world due to inadequate technology to combat disasters, rise in population, climate change, and continuing ecological degradation. The global efforts to manage disasters have proven to be insufficient to match the frequency and magnitude of natural disasters.

What is a Disaster?

A disaster is defined as a disruption on a massive scale, either natural or man-made,

occurring in short or long periods. Disasters can lead to human, material, economic or environmental hardships, which can be beyond the bearable capacity of the affected society. As per statistics, India as a whole is vulnerable to 30 different types of disasters that will affect the economic, social, and human development potential to such an extent that it will have long-term effects on productivity and macro-economic performance.

The various disaster-prone zones in India can be inferred from the map below:

Disasters can be classified into the following categories:

- **Water and Climate Disaster:** Flood, hail storms, cloudburst, cyclones, heat waves, cold waves, droughts, hurricanes.
- **Geological Disaster:** Landslides, earthquakes, volcanic eruptions, tornadoes
- **Biological Disaster:** Viral epidemics, pest attacks, cattle epidemic, and locust plagues
- **Industrial Disaster:** Chemical and industrial accidents, mine shaft fires, oil spills,
- **Nuclear Disasters:** Nuclear core meltdowns, radiation poisoning
- **Man-made disasters:** Urban and forest fires, oil spill, the collapse of huge building structures.

What is Disaster Management?

The Disaster Management Act of 2005 defines Disaster Management as an integrated process of planning, organizing, coordinating and implementing measures which are necessary for-

1. Prevention of threat of any disaster
2. Reduction of risk of any disaster or its consequences
3. Readiness to deal with any disaster
4. Promptness in dealing with a disaster
5. Assessing the severity of the effects of any disaster
6. Rescue and relief
7. Rehabilitation and Reconstruction

Agencies involved in Disaster Management

- **National Disaster Management Authority (NDMA):-** The National Disaster Management Authority, or the NDMA, is an apex body for disaster management, headed by the Prime Minister of India. It is responsible for the

supervision, direction, and control of the National Disaster Response Force (NDRF).

- **National Executive Committee (NEC):-** The NEC is composed of high profile ministerial members from the government of India that include the Union Home Secretary as Chairperson, and the Secretaries to the Government of India (GoI) like Ministries/Departments of Agriculture, Atomic Energy, Defence, Drinking Water Supply, Environment and Forests, etc. The NEC prepares the National Plan for Disaster Management as per the National Policy on Disaster Management.
- **State Disaster Management Authority (SDMA):-** The Chief Minister of the respective state is the head of the SDMA. The State Government has a State Executive Committee (SEC) which assists the State Disaster Management Authority (SDMA) on Disaster Management.
- **District Disaster Management Authority (DDMA):-** The DDMA is headed by the District Collector, Deputy Commissioner or District Magistrate depending on the situation, with the elected representatives of the local authority as the Co-Chairperson. The DDMA ensures that the guidelines framed by the NDMA and the SDMA are followed by all the departments of the State Government at the District level and the local authorities in the District.
- **Local Authorities:-** Local authorities would include Panchayati Raj Institutions (PRI), Municipalities, District and Cantonment II Institutional and Legal Arrangements Boards, and Town Planning Authorities which control and manage civic services.

Biological Disasters:

Definition: The devastating effects caused by an enormous spread of a certain kind of living organism that may spread disease, viruses, or an infestation of plant, animal, or insect life on an epidemic or pandemic level.

1. **Epidemic Level** – Indicates a disaster that affects many people in a given area or community.
2. **Pandemic Level** – Indicates a disaster that affects a much larger region, sometimes an entire continent or even the whole planet. For example, the recent H1N1 or Swine Flu pandemic.

Biological Disasters –

1. **The nodal Ministry for handling epidemics** – Ministry of Health and Family Welfare.
 - a. Decision-making
 - b. Advisory body
 - c. Emergency medical relief providing
2. **The primary responsibility of dealing with biological disasters is with the State Governments. (Reason – Health is a State Subject).**
3. **The nodal agency for investigating outbreaks** – National Institute of Communicable Diseases (NICD)
4. **Nodal ministry for Biological Warfare** – Ministry of Home Affairs (Biological warfare is the use of biological agents as an act of war)

Biological Disasters – Classifications

Charles Baldwin developed the symbol for biohazard in 1966.

The US Centres for Disease Control classifies biohazards into four biosafety levels as follows:

1. **BSL-1:** Bacteria and Viruses including *Bacillus subtilis*, some cell cultures, canine hepatitis, and non-infectious bacteria. Protection is only facial protection and gloves.
2. **BSL-2:** Bacteria and viruses that cause only mild disease to humans, or are difficult to contract via aerosol in a lab setting such as hepatitis A, B, C, mumps, measles, HIV, etc. Protection – use of autoclaves for sterilizing and biological safety cabinets.
3. **BSL-3:** Bacteria and viruses causing severe to fatal disease in humans. Example: West Nile virus, anthrax, MERS coronavirus. Protection – Stringent safety protocols such as the use of respirators to prevent airborne infection.
4. **BSL-4:** Potentially fatal (to human beings) viruses like Ebola virus, Marburg virus, Lassa fever virus, etc. Protection – use of a positive pressure personnel suit, with a segregated air supply.

Legislations for prevention of Biohazards in India:

CHAPTER - 3

CYCLONE DISASTER MANAGEMENT IN INDIA

Cyclone Disaster Management encompasses mitigation and preparedness measures for cyclones. India has a long history with cyclones. The location of India in the north Indian Ocean makes it vulnerable to tropical cyclones. In 2019-20, India witnessed multiple cyclones including Amphan, Nisarga, Nivar, etc.

A Brief About Cyclones:

The storms caused by wind blowing around the low-pressure areas are called cyclones. Similarly, storms around the high-pressure areas are called anticyclones. There are types of cyclones:

1. Tropical Cyclone

- The storms that originate over a warm tropical ocean are termed as tropical cyclones.
- Low atmospheric pressure, high winds and heavy rainfall are characteristics of these types of cyclones.
- Parts of the Atlantic region, Pacific Ocean, Indian Ocean witness tropical cyclones affecting Gulf Coast of North America, northwestern Australia, and eastern India and Bangladesh along with other areas.

2. Temperate Cyclone

- These are storms that occur outside the tropics.
- These are referred to as extratropical cyclones. Other names are frontal cyclones and wave cyclones.

- They occur in polar regions, temperate and high latitudes.

Cyclones in India:

India witnesses cyclones in the North Indian Ocean Cyclone Season usually between April and November. The Indian coastline length is around 7516 km and it is noted that 5770 km of coastline is vulnerable to natural hazards including cyclones. The east coast of India is more prone to cyclones than the western coast.

In Indian History, there have been various cyclones that made headlines due to their effect on the country.

The list of some important cyclones of India is given below:

1. Bholu Cyclone - 1970

- It struck Bangladesh (Then, East Pakistan) and West Bengal in 1970.
- It was the strongest cyclone of the 1970 North Indian Ocean Cyclone Season.
- It is considered as the deadliest cyclone causing around 3-5 lakh deaths.

2. Odisha Cyclone - 1999

- It was a very severe cyclonic storm that struck Thailand, Bangladesh, Myanmar and India.
- As the name suggests, Odisha was the most affected Indian state.
- According to the Indian Meteorological Department (IMD)'s data, around 9887 people lost their lives in this cyclone.

3. Cyclone Fani - 2019

- After the Odisha Cyclone 1999, it was the second strongest cyclone to strike Odisha.

- a. It is a weather warning that is issued by the IMD to aware people ahead of natural hazards.
- b. The four colours used by IMD are Green, Yellow, Orange, and Red.

Recently, in December 2020, IMD's DG announced the introduction of a dynamic and impact-based cyclonic warning system. IMD will work with NDMA, INCOIS and various state governments to successfully introduce this system.

CHAPTER - 4

CYCLONE

A cyclone is any low-pressure area with winds spiralling inwards. Cyclones rotate anti-clockwise in Northern Hemisphere and rotate clockwise in Southern Hemisphere. The process of Cyclone formation and intensification is called Cyclogenesis.

Types of Cyclone:

There are various types of cyclones depending on the type of prevailing low-pressure system.

1. Tropical cyclone
2. Extratropical cyclone
3. Tornadoes

Cyclones are not only present on Earth but also spotted on other planets like Mars, Jupiter, and Neptune. The Great Red Spot is the hurricane on Jupiter which is going on from 340 years. Great Black Spot was spotted in the Southern Hemisphere of Neptune.

How is a Cyclone formed?

When it comes to the formation or strengthening of a cyclone, Cyclogenesis plays a crucial role. It is an umbrella term to identify several different processes that result in a cyclone. Tropical cyclones are formed over warm ocean water near the equator. Warm moist air near the surface of the ocean rises upwards. This creates a low-pressure area near the surface. This results in the movement of cooler air from surrounding areas into the low-pressure area.

Now even this cool air becomes warm and moist and rises up. The above cycle keeps continuing. The warm moist air which rises up, cools the water in the air, resulting in the formation of clouds. This whole system of clouds and winds spins and grows. This entire cycle continues resulting in a cyclone. When the winds reach a speed of 63 mph, it is called a tropical storm, when the winds reach a speed of 119 kmph it is called a tropical cyclone or hurricane.

How are Cyclones addressed in Different Locations?

Cyclones are addressed by different names in different locations.

1. Hurricanes - In the Atlantic and Eastern Pacific.
2. Typhoons - In Southeast Asia
3. Cyclone - In the Indian Ocean and Western Pacific around Australia.

How are Cyclones named?

Lists and names of Cyclones are maintained and updated by an international committee of the World Meteorological Organisation (WMO). The original lists had only names of women. In 1979 men's names were also included. Names of men and women are used alternatively. Six lists are used in rotation. Hence the list used in 2020 will be used again in 2026. If the storms have wreaked havoc on a country, then the names will not be repeated due to reasons of sensitivity. Examples are Katrina in the USA (2005), Sandy in the USA (2012), Haiyan in the Philippines (2013), Irma, and Maria in the Carribean (2017).

Tropical Cyclones:

1999 Odisha Cyclone was termed as a super cyclone. It was one of the most intense tropical cyclones.

What is a tropical cyclone?

- Tropical cyclones are regarded as one of the most devastating natural calamities in the world.
- They originate and intensify over warm tropical oceans.
- These are ferocious storms that originate over oceans in tropical areas and move over to the coastal areas causing violent winds, very heavy rainfall, and storm outpourings.

Names of cyclone in different regions

They are known as:

- Cyclones in the Indian Ocean
- Hurricanes in the Atlantic
- Typhoons in the Western Pacific and the South China Sea
- Willy-willies in Western Australia

Conditions for the formation of Tropical Cyclone:

The conditions that favour the formation and intensification of tropical cyclone storms are:

- Large sea surface with a temperature higher than 27° C
- Presence of the Coriolis force
- Small differences in the vertical wind speed
- A pre-existing weak- low-pressure area or low-level-cyclonic circulation.
- Upper divergence above the sea level system.

Formation of Cyclone

- The energy that strengthens the storm comes from the condensation process in the towering cumulonimbus clouds, surrounding the centre of the storm.
- With an uninterrupted supply of moisture from the sea, the storm is again strengthened.

- On reaching the terrestrial region the moisture supply is cut off and the storm dissipates.
- The place where a tropical cyclone cuts the coast is called the landfall of the cyclone.
- A landfall is frequently accompanied by sturdy winds, heavy rain and mounting sea waves that could threaten people and cause damage to properties.
- Cyclones which cross 20 degrees North latitude are more destructive.
- They cover a larger area and can originate over the land and sea whereas the tropical cyclones originate only over the seas and on reaching the land they dissipate.

Eye of Cyclone

A mature tropical cyclone is characterised by the strong spirally circulating wind around the centre which is called the eye.

- The eye is an area with calm weather descending air.
- It is characterized by light winds and clear skies.

Eye Wall

- Around the eye is the eyewall, where there is a strong spiralling rise of air to a greater height reaching the tropopause.
- The wind reaches maximum velocity in this region and torrential rain occurs here.
- From the eyewall, rain bands may radiate and trains of cumulus and cumulonimbus clouds may drift into the outer region.

Temperate Cyclone (Extratropical Cyclones)

Temperate cyclones are also known as Extratropical cyclones where the term "Extratropical" signifies that this type of cyclone

Case in Point: Odisha

1. 1999: In the year 1999, cyclone BOB 06 brought about huge destruction in the eastern coast. This storm is also called Paradip cyclone, with a speed of 160 miles per hour, this cyclone devastated Odisha and Myanmar.
2. More than 10,000 people were killed in this cyclone.
3. Properties worth 400 crore dollars were damaged.
4. Till date, this has been the most devastating cyclone of the North Indian Ocean.
5. In the year, 2013, Odisha had to undergo a massive catastrophe once again- this time, cyclone Phailin caused huge damage to Odisha. It also impacted neighbouring countries such as Thailand and Myanmar. 45 people were killed in this cyclone, while 69 crores, 60 lakh dollars worth property was lost.

Case in Point: Tamil Nadu

1. 11 minor and major cyclones made landfall in Tamil Nadu from 2005-2018.
2. The Fanoos cyclone in 2005 killed 273 people, mostly from Tamil Nadu. It also caused a loss of 2 Crore, 14 lakh dollars.
3. In 2008, Cyclone Nisha took the lives of 200 people, and there was a loss of 80 crore dollars.
4. In 2010, Cyclone Jal made landfall in Tamil Nadu and killed 118 people. 12 people went missing. This storm damaged property worth 173 crore dollars.
5. In 2011, Cyclone Thane killed 48 people. Damage estimated was 23 crore, 50 lakh dollars. This storm affected the southern part of India and Sri Lanka.
6. In 2012, Cyclone Neelam killed 75 people and 5 Crore, 67 lakh dollars was the property worth that was damaged.

7. Cyclone Vardah in the year 2016, and Cyclone Ockhi in 2017, also wreaked havoc in Tamil Nadu.

Climatic disasters in India cause massive loss of life as well as property. They might be in the form of Tsunami's, hurricanes, and even dust storms.

A Look at Different Types of Storms:

Nature has always proved to be more powerful than humans. Despite developments in weather forecasting techniques, and technological advancements, disasters at many times cannot be prevented. Time and again, we have seen and read about many natural disasters occurring in the country and outside, such as storms, tornadoes, hail, thunderstorms, etc, causing great havoc in the process.

These storms have the potential to harm lives and property through a storm surge, heavy rain, or snow causing flooding, lightning and vertical wind.

However, How Does a Storm Occur?

1. Storms are a natural phenomenon caused by violent atmospheric disturbances, over land and water.
2. Storms are created when a center of low pressure develops with the system of high pressure surrounding it.
3. They are classified by how strong the winds are, or by how heavy the rainfall, lightning or snow are.
4. Storms that form north of the equator spin counter-clockwise. Storms south of the equator spin clockwise.
5. This difference is because of the earth's rotation on its axis. As the storm system rotates faster, an eye forms in the center.

CHAPTER - 5

AMPHAN CYCLONE

Amphan is a super tropical cyclone that originated from the Bay of Bengal in May 2020. It is considered the first super cyclonic storm in the Bay of Bengal since the 1999 Odisha cyclone. It is a part of the North Indian Ocean Cyclone Season. The Indian states of West Bengal and Odisha, and the country of Bangladesh were hit by Amphan as a 'very severe cyclonic storm.'

The National Crisis Management Committee was in charge to review the preparedness for the impending cyclone Amphan.

At the national level, National Crisis Management Committee (NCCM) and Cabinet Committee on Security (CCS) are the key committees involved in the top-level decision-making related to Disaster Management.

Facts about Cyclone Amphan:

The following are the key facts about the Amphan cyclone as they form part of current affairs for the UPSC exam (a major section from where questions are asked):

1. Thailand has given the name of the cyclone - Amphan, which is pronounced as 'UM-PUN'.
2. Amphan formed over the Bay of Bengal as a tropical cyclone and later intensified into a 'Very Severe Cyclonic Storm' (VSCS) to 'Extreme Severe Cyclonic Storm (ESCS)'.
3. It made landfall between Digha (West Bengal) and Hathiya islands (Bangladesh) on May 20.
4. The regions of East Midnapore, North and South 24 Parganas, Howrah, Hooghly, and West Midnapore were affected by the heavy rainfall.

5. North Odisha Coast faced the maximum impact after Amphan made landfall with the wind speed of 110-120 mph.
6. The range of wind speed of Amphan reaches up to 230-265 mph before it weakens in intensity.
7. Doppler Weather Radar (DWR) at Visakhapatnam (Andhra Pradesh) was used to track cyclone Amphan.
8. After the Phailin cyclone that had hit the Bengal-Odisha coast in 2013, Amphan is said to be the strongest tropical cyclone to hit the coast.
9. The trajectory of Amphan was towards West Bengal and Bangladesh and it made landfall
 - a. West Bengal - Sagar Island
 - b. Bangladesh - Hatiya Island
10. National Disaster Response Force (NDRF) is a specialized authority constituted under the Disaster Management Act 2005. It was monitoring Amphan with the parallel monitoring by:
 - a. National Crisis Monitoring Committee (Constituted by the Government of India, to meet the exigencies of natural calamities.)
 - b. Cabinet Committee on Security (CCS)
 - c. Indian Meteorological Committee (IMD)
11. The other Indian States those were impacted by Amphan were:
 - a. Kerala - Heavy rainfall; Yellow Alert has been issued

Cyclone Nisarga -

The Nisarga Cyclone has formed following the low-pressure area over the Southeast and East-central Arabian Sea and Lakshadweep area. Cyclone Nisarga which is a tropical cyclone is termed as 'Severe Cyclonic Storm' by the Indian Meteorological Department (IMD) where the department has notified that the storm is likely to cross Northern Maharashtra on 3rd June 2020 with a maximum sustained speed of 100-110 kmph gusting to 120 kmph.

Major Points about Cyclone Nisarga:

S.No	Facts
1	The Nisarga Cyclone is formed because of the depression in the Arabian Sea. Note: Areas of low-pressure are called depressions or cyclones.
2	Bangladesh has given the name 'Nisarga' Note: Regional Specialized Meteorological Centre (RSMC) New Delhi Tropical Cyclone Center is responsible for naming the tropical cyclones that have formed over the Bay of Bengal and the Arabian Sea when they have reached the relevant intensity.
3	The two states that are to be affected by the Cyclone Nisarga: <ul style="list-style-type: none"> ● Maharashtra ● Gujarat
4	Cyclone Nisarga is a tropical cyclone formed because of exceptional warm ocean temperatures.
5	Doppler Weather Radars (DWRs) at Mumbai and Goa are being used to track the cyclonic storm.
6	IMD stated the cyclone Nisarga will make landfall on 3rd June 2020
7	IMD has also given the speed intensity of Nisarga Cyclone for two days: <ul style="list-style-type: none"> ● 3rd June - Severe Cyclonic Storm - 100-110 kmph to gusting speed of 120 kmph ● 4th June - Depression - 30-40 kmph to gusting speed of 50 kmph.

नोट - प्रिय IAS उम्मीदवारों, यहाँ हमने इस टॉपिक का मात्र SAMPLE ही दिया है, पूरा टॉपिक नहीं दिया है। यदि आपको हमारे नोट्स के सैंपल अच्छे लगे हों तो कम्पलीट नोट्स खरीदने के लिए नीचे दिए गये हमारे संपर्क नंबर पर कॉल कीजिए या लिंक पर क्लिक करें। दोस्तों, हमें पूर्ण विश्वास है कि ये नोट्स आपकी “UPSC IAS (PRE. & MAINS)” की परीक्षा में पूर्ण संभव मदद करेंगे और आप “INFUSION NOTES” के साथ IAS की परीक्षा में जरूर सफल होंगे, धन्यवाद।

the relationship between the agency and Chinese authorities.

- Initial concerns included the observation that while the WHO relies upon data provided and filtered by member states, China has had a “historical aversion to transparency and sensitivity to international criticism”. US President Donald Trump has been the most vocal of all the critics of the organization. This has led to the US’s withdrawal from the WHO.

CHAPTER - 23

TRADITIONAL KNOWLEDGE FOR DISASTER MANAGEMENT

- Why should people be brought in for a community approach to disaster management? The answer should be easy to appreciate. If tribals in the Andamans could survive the tsunami, it was because their existing warning systems worked well in comparison to our non-existent modern systems
- The fact that traditional houses of wood and stone survived the Uttarkashi earthquake not so long ago while modern buildings collapsed offered a similar lesson.
- This intelligence needs to be tapped for devising approaches to management of disasters.

High Cost of Disaster

- India is very vulnerable to natural hazards because of its unique geo-climatic conditions. Disasters occur in India with grim regularity causing enormous loss of life and property.
- Almost 85% of the country is vulnerable to single or multiple disasters and about 57% of its area lies in high seismic zones.
- 40 million hectares of the country’s land area is prone to flood
- 68% of the area is susceptible to drought
- investment in disaster prevention and mitigation is highly cost effective: for example, every dollar spent on mitigation saves three to five dollars on relief and rehabilitation
- Unfortunately, long-term benefits of crisis prevention and mitigation have not been duly factored into our planning and administrative systems.

Earthquakes

- Himalayas – the youngest among the mountain ranges
- very severe earthquakes in several parts of the Himalayan and surrounding regions
- This makes the entire region covering fourteen states (located in western and central Himalayas, northeast, and parts of Indo-Gangetic basin) highly prone to earthquakes.
- The other seismically active regions of the country include the
 - Gulf of Khambhat
 - Rann of Kutch in Western Gujarat,
 - Lakshadweep and Andaman and Nicobar Islands.
- Earthquakes can neither be prevented or predicted in terms of their magnitude, or place and time of occurrence
- Therefore, the most effective measures of risk reduction are
 - Building construction norms
 - effective rescue and relief actions immediately after the occurrence of the earthquake.

Tsunamis

- Tsunamis are large waves generated by sudden movements of the ocean floor that displace a large volume of water.
- Tsunamis are usually associated with earthquakes
- But tsunamis can also be triggered by other phenomena like submarine or terrestrial landslides, volcanic eruptions, explosions or even bolide (e.g, asteroid, meteor, comet) impacts.
- Tsunamis have the potential to strip beaches, uproot plantations, and inundate large inland tracts and extensively damage life and property in coastal areas.
- The tsunami in December 2004 caused severe damage to life and property in the coastal areas of Andhra Pradesh, Tamil Nadu,

- Pondicherry, Kerala and Andaman and Nicobar Islands,
- The confirmed death toll in India was 12,000+ while 5,640 people are still unaccounted for.
- The total estimated value of damages is Rs.11,000+ crores (Approx US \$2.56 billion)

Floods

- The term flood is generally used when the water-flows in rivers, streams and other water bodies cannot be contained.
- Floods occur regularly in India affecting about 10% of area.
- According to the estimates of the National Flood Commission (1980), commonly known as the Rashtriya Barh Ayog, Assam and Bihar are the States worst affected by floods followed by U.P. and West Bengal.
- In many cases, the natural process of flooding is aggravated by man-made due to
 - unplanned or unauthorized construction activities;
 - Increasing pace of urbanization,
- The incidence of floods in recent times in urban areas such as Mumbai, Surat, Vadodara and other places is symptomatic of this trend and is the direct result of unauthorized construction activities.
- poor urban planning and implementation,
- lack of investment in storm water drainage and sewerage
- The country has to shift towards efficient management of flood plains, disaster preparedness, response planning, flood forecasting and warning
- There should be strict regulation of settlements and economic activity in the floodplain zones along with flood proofing, to minimise the loss of life and property on account of floods.
- Flood forecasting activities should be modernized.

Industrial Disasters

- Among man made disasters, probably the most devastating (after wars) are industrial disasters.
- These disasters may be caused by chemical, mechanical, civil, electrical or other process failures in an industrial plant due to accident or negligence,
- But they also cause widespread damage within and/or outside the plant
- worst example = Methyl Iso-cynate gas leak in 1984 from the Union Carbide Factory in Bhopal (known as the Bhopal Gas Tragedy) which has
- so far claimed more than 20,000 lives and injured several lakh persons.

Reforms after Bhopal Gas tragedy

- In the pre-Bhopal Gas Tragedy era, industrial safety was governed by legislations like the Factories Act, 1948 and the Explosives Act, 1884.
- These laws proved to be inadequate to provide safety to workers as well as to the people living in the surrounding areas
- So, The Environment Protection Act, 1986 was enacted.
- Stringent environmental protection laws have prevented major industrial disasters after Bhopal, but minor disasters do take place on and off site and also during transportation of hazardous materials, which claim a number of lives each year besides creating environmental problems.
- With rapid industrialization, the threat of industrial disasters has increased.
- However, in spite of the existence of a large number of laws, their enforcement has left much to be desired.

Epidemics

In India, the major sources of epidemics can be broadly categorized as follows

<https://www.infusionnotes.com/>

- Epidemics often take place due to poor sanitary conditions leading to contamination of food and water or due to inadequate disposal of human or animal carcasses in post-disaster situations.
- They become real dangers during floods and earthquakes. Sometimes, poor solid waste management may create epidemics like plague.
- Plague is quite uncommon now but it can still occur as it did in Surat in 1994.

Nuclear Hazards

- Department of Atomic Energy (DAE) is the nodal agency in the country in respect of man made radiological emergencies in the public domain.
- Under favourable environmental conditions, a few insects can dramatically multiply, form large swarms able to migrate great distances
- they threaten agriculture over a large part of Africa, the Middle East and Southwest Asia = food security problem.
- International cooperation lies at the core of an effective strategy for locust control.

Slow vs Rapid Onset disasters

Slow onset disaster

- While the effects of waves, currents, tides and wind are primary natural factors that influence the coast,
- construction of artificial structures, mining of beach sand, building of dams
- About 23 per cent of India's mainland coastline of 5423 km is getting affected by erosion.

Crisis / Disaster Response Mechanism in India

- **Arthashastra**, (a treatise on public administration by Chanakya in the 4th century B.C), devoted a section to mitigation measures to combat famines
- Modern methods of crisis management began to be applied from the late 1870
- After Independence, drought relief works were undertaken in areas affected by severe droughts.
- With the onset of the green revolution in the late 1960s the necessity for famine relief work declined
- A holistic drought management programme was taken up in the form of the Drought Prone Areas Programme (DPAP).
- Legislation on disaster management at the national level was enacted in the year 2005 with the Disaster Management Act, 2005.

Disaster Response Mechanism in India

- community is usually the first responder in case of a disaster
- in urban areas the response is articulated by agencies like the civic authorities, the fire brigade and the local police station
- At present, panchayats do not have the capacity to react in case of disaster.
- So, it is the district administration, which retains the basic responsibility of handling crisis situations with the Collector playing a pivotal role.

Constitution of India: Disaster Management

- The Indian Constitution has specified specific roles for the Union and State Governments.
- However, the subject of disaster management does not find mention in any of the three lists in the Seventh Schedule of the Indian Constitution.

State Government & Disaster Management

- State Governments = post disaster relief and rehabilitation
- A few states have created separate Disaster Management Departments.

Role of CM

- A Cabinet Committee on Natural Calamities under the chairpersonship of the Chief Minister takes stock of situations and is responsible for all important policy decisions.

Role of Chief Secretary

Every state has a Crisis Management Committee under the chairpersonship of the Chief Secretary,

- It reviews crisis situations on a day-to-day basis at the time of crisis,
- coordinates the activities of all departments and provides a decision support system to the district administration.

Role of District Collector

- District Magistrate/Collector has the responsibility for the overall management of disasters in the district.

CHAPTER - 37

ROLE OF SOCIAL MEDIA IN DISASTER MANAGEMENT

INTRODUCTION:

The media forges a direct link between the public and emergency organizations. It plays a very important role in publishing vital information to the public before, during and after disasters. The media assists in the management of disasters by educating the public about disasters and facilitating discussions about disaster preparedness and response for continuous improvement.

SOCIAL MEDIA

Social media is the collective of online communications channels dedicated to community-based input, interaction, content-sharing and collaboration. Social Media allows average people to connect to the global network even when resources such as landlines and cellphones are not working.

TYPES OF MEDIA

Radio and Television are prominent players in electronic media, whereas newspapers, magazines, journals are part of the print media. 1. Electronic media 2. Print media Traditional forms of media such as radio or television are supplemented by Social Media.

FACEBOOK

Facebook offers disaster management organizations, such as FEMA (Federal Emergency Management Agency) to keep the public informed of emergency situations

before, during, and after they occur. Facebook safety check In case of a disaster, Facebook recognises the users being located in the affected area. Then, the users can post that they are safe via a simple button.

TWITTER

Twitter has become an efficient and popular way to report on disasters because of its popularity and ease of use. Currently FEMA has 34 accounts on Twitter, which allows the agency to keep the public informed during an emergency.

YOUTUBE

In disaster management YouTube can provide the public with information on what to do prior to a disaster. This can include something as simple as a video on how to pack a "72 HOUR KIT" or other information on how to plan ahead for a disaster.

How Social Media Can Be Used in Disasters?

Before the disaster

During the disaster

After the disaster

Before the disaster

1. Informs the public on how to be prepared if a disaster occurs.
2. Shows the public where to look for information on a disaster if one were to occur.
3. Gives the public confidence that the disaster management organization is capable of

INTERNAL SECURITY

CHAPTER - 1

INTRODUCTION TO INTERNAL SECURITY OF INDIA

Internal security can be defined as the management of security within the border of a country. It means the maintenance of peace and law and order, and upholding the sovereignty of the country. In our country, Internal security comes under the purview of the Ministry of Home Affairs.

Introduction:

Security can be categorized into two groups:

Internal security – Management of the security within the border of a country. Means maintenance of peace and law and order, and upholding the sovereignty of the country. In our country internal security comes under the purview of the Ministry of Home Affairs.

External security – Management of security against aggression by a foreign country. External security is the sole domain of the Armed forces of the country. This comes under the ambit of the Ministry of Defence.

What is National Security?

Law and order problems: Problems which do not threaten the national security in traditional terms but create a violent situation which in turn creates breeding ground for a National security situation. These are activities like civil war, ethnic conflict, crime and drugs. National Security, in a more traditional sense, refers to the preservation of the state, its territorial integrity, political institutions, and national

sovereignty from physical threats. But in the modern times the definitions have broadened to include following facets:

- Economic threats:** They indirectly threaten the developmental dynamics by disturbing the economic processes.
- Technology driven threats:** Threats like cyber-terrorism, space warfare etc. have assumed increased importance in recent times.
- Health Security:** Diseases like Tuberculosis, Malaria and HIV are seen as threats to human security because of the enormous loss of life they cause.

Important aspects of internal security:

- Upholding the rules and laws made by the authority.
- Accepting the sovereign power of people.
- Protecting India's national sovereignty.
- Securing the territorial integrity of India.
- Promoting India's rise to its rightful place in international affairs.
- Ensuring a peaceful internal environment within India.
- Creating a climate for our citizens that is just, equitable, prosperous, and shields them from risks to life and livelihood.

These aspects of internal security are ensured by the police, which is helped by the central armed police forces.

Destabilising a country through internal disturbances is more economical and less objectionable, particularly when direct warfare is not an option and international borders cannot be violated.

The 43rd Report to the concerned Parliamentary Standing Committee, the Ministry of Home Affairs has brought out that “210 of the 535 districts in the country are affected by serious internal security problems or public disorders” and almost 40 per-cent areas facing serious disorders of one or the other kind.

Challenges to the Internal Security of Country:

- Political instability and internal social disharmony
- Naxalism
- Terrorism and nexus with organized crime
- Cyber-crime and cybersecurity
- Religious wars and caste crimes
- Coastal and border security
- Insurgency in North-East and militancy in J&K
- As conventional war is not resulting in the desired result hence, they went for opting other ways like Psy-Wars (psychological wars). This is fourth generation warfare disturbing the civil fabric of the nation and instead of conquering land is being replaced by the concept of controlling the minds of the civil society using Psy-ops (psychological operation).
- These challenges to internal security can increase to multiple fold if border management is weak so a comprehensive border can act as a check over the threats to the internal security of the country.

Factors responsible for Internal Security Problem in the country:

- Some problems were since the time of independence, but we are failed to resolve them:
 - Unfriendly and hostile neighbours (China, Pakistan etc.)

- Unemployment and underemployment (lack of inclusive development)
- Some are due to administrative failure like:
 - Inequitable growth.
 - Widening gap between haves and have-nots.
 - Governance deficit.
 - Failure to curtail organized crimes.
 - Due to partisan politics:
 - Increasing the communal divide.
 - Increasing caste awareness and caste tension.
 - Politics based on the sectarian, ethnic, linguistic etc.
 - Growing regional aspirations and the government’s failure to fulfil it.
 - The secessionist movement in Nagaland and Jammu and Kashmir
 - Geographical factor
 - Living in isolation.
 - Very tough terrain near the borders
 - Governance deficit:
 - Poor criminal justice system
 - Large scale corruption
 - Nexus between the criminals, police and politicians in organised crime.
 - Lack of development.

Each factor mentioned above is exploited by the nefarious actor time and again to create instability in the country. The hostile neighbours leave no opportunity to make their vision true.

Internal Security Doctrine:

A national security doctrine helps the state to identify and prioritize that country’s geopolitical interests. India does not have any such ‘doctrine’ so far.

Internal Security Doctrine:

India has seen crisis after crisis resulting from militancy, insurgency, terrorist attacks, unsettled border disputes, etc. For Example,

Hybrid Warfare: Emerging threat:

Recently, a Chinese data company-Zhenhua has harvested information on millions of people, allegedly on behalf of Beijing's intelligence services, possibly engaging in early stages of 'hybrid warfare'.

Meaning of Hybrid Warfare:

Hybrid warfare is an emerging, but ill-defined notion. It generally refers to the use of unconventional methods as part of a multi-domain warfighting approach. These methods aim to disrupt and disable an opponent's actions without engaging in open hostilities. Following can be cited as its general characteristics:

- The methods adopted by it are a combination of activities, including disinformation, economic manipulation, use of proxies and insurgencies, diplomatic pressure and military actions. For example, Russia's use of gas and lending instruments in the Ukrainian conflict.
- It tends to target areas which are highly vulnerable and where maximum damage can be caused with minimum effort.
- It usually involves non-state actors indulging in subversive roles supported by states in order to give the latter some plausible deniability.
 - Other examples closer to the idea of hybrid warfare are Iran's activity in Syria and ISIL's activities in Syria and Iraq.

Reasons for resorting to Hybrid Warfare by state and non-state actors:

- Hybrid warfare uses a wider set of military, political, economic, civilian and informational instruments which are usually overlooked in traditional threat assessments.

- It targets vulnerabilities across societies in ways that we do not usually think about.
- It synchronizes attacks in novel ways. For example, an urban gathering can experience a simultaneous cyber-attack and a 'lone-wolf' attack, which if synchronized could cause large scale damage to life and property.
- It can be tailored according to the circumstances to stay below certain detection and response thresholds, including international legal thresholds, thus hampering the decision-making process and making it harder to react to such attacks.
- A hybrid warfare campaign may not be discovered until it is already well underway, with damaging effects having already begun degrading a target's capability to defend itself. For example, 2008 Mumbai attacks and a series of 'lone wolf' attacks in Europe were only discovered when they started happening.

Reasons for targeting the urban spaces for Hybrid Warfare:

- Urban spaces due to their large populations and economic vibrancy provide ample opportunity for terrorists and non-state actors to sneak in and inflict large scale damage to terrorize populations through "shock and awe" tactics.
- Traditional armed forces are ill-trained and equipped to fight in crowded urban areas with large civilian populations.
- Conventional warfare demands direct and complete engagement with the adversary. Hybrid Warfare uses proxies as indirect tools creating a scenario of limited warfare.

How Hybrid Warfare and Hybrid Threats are potential issues for India?

India has been at the receiving end of variants of Hybrid Warfare. Firstly, from Pakistan in the form of state sponsored terrorism and the other through cyber-threats from China akin to the one associated with Zhenhua. But increasing inclination towards Hybrid Warfare from both state and non-state actors can lead to following issues:

- **New forms of terrorist attacks:** The idea of Hybrid Warfare encourages new forms of terrorist attacks such as 'lone-wolf' attacks and creation of 'sleeper cells'.
- **Cyber-attacks:** An adversary can pressure the government to concede to its demands by threatening devastating cyber-attacks aimed at the civilian population. Examples include attacks on networks governing hospitals or electricity and water supplies.
- **Interference in electoral processes:** Use of techniques from campaigning through the media and social networks to securing financial resources for a political group may indirectly influence the outcome of an election in a direction that favors the adversary's political interests.
- **Disinformation and fake news:** An adversary can create a parallel reality and use falsehoods to fuel social fragmentation. The idea behind this is to disorient the public and make it difficult for a government to seek public approval for a given policy or operation.
- **Financial influence:** An adversary can make investments, conclude unfavorable energy-supply deals, or offer loans that make a country vulnerable in the long run to political pressure. For example, the recent steps by Chinese companies to aggressively acquire Indian companies

through the FDI route in the background of COVID-19 could fall under this category.

Possible solution to combat Hybrid Warfare:

Hybrid Warfare is a multi-pronged warfare methodology, thus, to effectively negate it, the response should also be holistic in nature:

- **Institutional measures:** to keep vulnerabilities in check and estimate possible hybrid threats.
 - Conduct a self-assessment of critical functions and vulnerabilities across all sectors and ensure regular maintenance. For example, regularly upgrading critical Fintech systems in the country.
 - Enhance traditional threat assessment activity to include non-conventional political, economic, civil, international (PECI) tools and capabilities.
 - Creation of multinational frameworks – preferably using existing institutions and processes – in order to facilitate cooperation and collaboration across borders.
- **Training of armed forces:** as in hybrid warfare, armed forces have a dual role of protecting civilian population and disabling the enemy. Following techniques can be adopted:
 - Training in special battle techniques, as well as conditioning to overcome urban combat stress.
 - Training in use of technological tools such as smart robots, Unmanned Aerial Vehicles (UAVs)
 - Intelligence tools like Real Time Situational Awareness (RTSA) for precise operations.
- **Strengthening the democratic institutions:** enables the government to gain trust of its citizens. This helps the government negate

CHAPTER - 10

SECURITY CHALLENGES AND THEIR MANAGEMENT IN BORDER AREAS

- India has a land border of over 15,000 kms, which it shares with seven countries (Pakistan, China, Bangladesh, Nepal, Myanmar, Bhutan, and Afghanistan).
- Further, it has a coastline of over 7,500 kms. Thus, it becomes important that we develop capabilities to protect our border areas in varied terrains, with multiple countries with whom we have very different security relationships.
- In the Indian case, borders are quite complex and almost every type of extreme geography is present at different borders viz. deserts, fertile lands, swampy marshes or tropical evergreen jungles. There is cross border smuggling, the problem of drugs, cattle, humans, artefacts, fake Indian currency note (FICN), etc.

Challenges of Border Security:

Borders are the lines which separate the territories of two or more sovereign nations. There are three aspect of border in international scenario:

1. Land borders
2. Maritime boundaries
3. Airspace

All these three borders are exploited by the enemy to create instability in the country.

Issues Related to Border Management in India:

- **Porosity of borders:** International borders with Pakistan and Bangladesh run through

diverse terrain including deserts, marshes, plains and mountains. This porosity of borders facilitates various illegal activities such as smuggling, trafficking of humans, drugs and arms and infiltration.

- **Contested International borders:** History of mistrust and constant border skirmishes with Pakistan along line of control (LOC) makes India highly susceptible to cross-border terrorism. Similarly, India's border with Myanmar is threatened by several insurgent groups that have found sanctuaries in jungles along the border. Political boundary issues of "enclaves and adverse possessions" in Bangladesh have resulted in political sensitivity along the entire eastern border.
- **Inefficiency in Border management:** Indian borders continue to be guarded by military and police forces that report to different ministries in the Centre and states, making the border management task arduous and leading to duplication of efforts by the security forces.
- **Lack of critical infrastructure:** Critical infrastructure such as observation towers, bunkers, Border Flood Lights etc. are lacking in many border areas which also prevent deployment of hi-tech equipment.
- **Poor intelligence and resource efficiency:** Security forces are ill-equipped to handle border management given poor intelligence capabilities and severe resource deficiency.
- **Ethnic conflicts and separatist movements:** The situation has worsened due to the changed demographic profile of many Border States and shift in ethnic balance of communities as a result of illegal migration.

- **Overpopulation in the border areas:**
Density of population in the border areas at some places is approximately 700-800 persons per square km on the Indian side and about 1,000 persons on the Bangladesh side.
- **Political instability and disorder in its periphery impacts India's security directly or indirectly.** Proxy war between India and Pakistan adds to this security risk.

India's Land Boundaries Scenario:

- Bangladesh (4,096 km).
- China (3,488 km).
- Pakistan (3,323 km).
- Nepal (1,751 Km).
- Myanmar (1,643 Km).
- Bhutan (699 Km)
- Afghanistan (106 Km)

India-Pakistan Border:

This segment of border is mainly divided into three different parts:

1. **Radcliffe Line** from Gujarat to parts of Jammu district in Jammu and Kashmir (length of 2308).
 2. **Line of Control (LOC)** runs along the district of Jammu and some portions of Leh.
 3. **Actual Ground Position Line (AGPL)** from NJ 9842 to Indira col.
- This is spread across extreme climatic conditions given that the boundary runs from the hot Thar Desert in Rajasthan to the cold Himalayas in Jammu and Kashmir.
 - The last two segments of border (LOC and AGPL) are the zone of tension between the forces of two countries. Along with the vulnerability of infiltration by terrorists

from other side of border takes place in the region of LOC.

- The India-Pakistan border does not follow the geographical barrier so it runs through different climatic condition such as from desert, marshes, plains and by the peak of lofty mountain ranges these conditions along the border area has made border very porous in nature which has facilitated the various illegal activity in the region like:
 - Trafficking of drugs (proximity to golden crescent) and arms.
 - Fake Indian Currency Notes (FICN)
 - Activities of money laundering are also rampant in this border zone.
 - Presence of Hawala networks.
 - Safe havens for terrorists and secessionist elements.
 - Indus River water sharing issue
 - Along with these illegal activities, the propaganda front which is used by Pakistan to erode the trust of people living in border areas towards the Indian government.
 - Increased instability in the region of Jammu and Kashmir due to money and material support from Pakistan gave rise to the secessionist militants in the border region.

Challenges along Indo-Pak Border:

- Border dispute at Sir Creek and Kashmir.
- River water sharing issue at Indus river.
- Infiltration and Cross-border terrorism. targeted to destabilize India. Recently BSF detected a fifth (since 2012) cross-border tunnel in the forest area of Jammu.
- Diverse terrain including desert, marshes, snow-capped mountains and plains makes border guarding difficult.
- Time & cost overruns in infrastructure projects due to unforeseen. circumstances & natural calamities.

नोट - प्रिय IAS उम्मीदवारों, यहाँ हमने इस टॉपिक का मात्र SAMPLE ही दिया है, पूरा टॉपिक नहीं दिया है। यदि आपको हमारे नोट्स के सैंपल अच्छे लगे हों तो कम्पलीट नोट्स खरीदने के लिए नीचे दिए गये हमारे संपर्क नंबर पर कॉल कीजिए या लिंक पर क्लिक करें। दोस्तों, हमें पूर्ण विश्वास है कि ये नोट्स आपकी “UPSC IAS (PRE. & MAINS)” की परीक्षा में पूर्ण संभव मदद करेंगे और आप “INFUSION NOTES” के साथ IAS की परीक्षा में जरूर सफल होंगे, धन्यवाद।

संपर्क करें - 9887809083, 8233195718, 9694804063, 8504091672

प्रिय दोस्तों, अब तक हमारे विभिन्न नोट्स में से विभिन्न परीक्षाओं में आये हुए प्रश्नों के परिणाम -

<u>EXAM (परीक्षा)</u>	<u>EXAM DATE</u>	<u>हमारे नोट्स में से आये हुए प्रश्न</u>
RAS PRE. 2021	27 अक्टूबर 2021	74 प्रश्न (150 में से) CUT OFF - 64

UPSC - CSE (IAS) PRE. AND MAINS

Dear UPSC - CSE aspirants, In these notes we completed the whole syllabus of UPSC - CSE (IAS) PRE And MAINS in 5400 pages, in 15 Parts , which take approximately five to six months to complete.

The 15 Parts are -

GENERAL STUDY PAPER - 1

Part - 1 Geography (India + World)

Part - 2 Ancient and Medieval History of India

Part - 3 Modern History of India

Part - 4 Art and Culture

Part - 5 Society, World History and Post-Independence India

GENERAL STUDY PAPER - 2

Part -1 Polity, Constitution and Governance

Part - 2 International Relations

Part - 3 Social Justice and Welfare Schemes

GENERAL STUDY PAPER - 3

Part - 1 Economics Part - 1

Part - 2 Economics Part - 2

Part - 3 Science and Technology

Part - 4 Environment, Ecology and Biodiversity

Part - 5 Disaster Management and Internal Security

GENERAL STUDY PAPER - 4

Part - 1 Ethics, Integrity and Aptitude + Case study

Paper - 1 Essay Writing + Current Events & Govt. Schemes

Why prepare from Infusion Notes for UPSC CSE ?

Features of the notes:

- The notes are prepared by:
 1. Best faculties from **Delhi, Uttar Pradesh (Allahabad), Rajasthan (Jaipur And Jodhpur) and MP** coaching centres who are expert in their subjects having 7 to 8 years of experience.
 2. Key points of **toppers** who are already in service also added in these notes to help you.

3. Infusion notes also have **their expert team** who are best in their core subject, they review the material and complete the final notes.
4. A single reading and revision of these notes can prepare you up to **80% for UPSC CSE exam**.
5. These notes contain the view of articles and editorials daily explained in **The Hindu and Indian Express**.

What These Notes Contains:

1. Complete syllabus of **UPSC – CSE (IAS) Pre. And Mains** and key points that are important on the basis of **Previous year question papers** – Topic-wise segregated questions of past 30 years.
 1. We **highlighted and briefly explain** the important topics which asked in **Previous year question papers**.
 2. **Flowcharts, Maps, and Infographics** available in these notes helps in picturizing the concept in a precise manner, and makes it easy to remember.
 3. These notes have **Static + Current Coverage data**. It Links the current articles with the related static content of all GS papers .
 4. All notes are **handwritten and clearly explained**.
 5. We also mention some **tricks and tips** that helps you in quick learning.
 6. We only mention **the content** that is important according to exam point of view.

How these notes helps you in your success:-

1. Notes are **completely prepared by experts and UPSC CSE toppers** in a very **convenient language** that you can easily understand and

- you don't need any coaching and other market books, like this your lakhs of money which you spent on coaching centres can be saved.*
- 2. All material is completed on the basis of last years question papers and topics which helps you to save your time from reading extra data and different types of books available in market.*
 - 3. These notes are prepared in a way that if any student does not clear the exam for any reason, then these notes will also help them for any other exam similar to this syllabus like UPPSC, MPPSC, RAS etc.*
 - 4. These notes are created in a way that every student can easily read them, like weak, medium or intelligent students.*

CONTACT US AT -
